MBA-Tech (Product Management) candidate with a strong foundation in software engineering, AI, and business strategy. Experienced in translating customer needs into scalable product solutions through user-centric thinking, market research, and data-driven decision-making. Skilled in cross-functional collaboration, Agile methodologies, product analytics, and stakeholder management. Passionate about building AI-powered digital products that create measurable business and customer value.

EXPERIENCE

Technical Trainer, ByteXL Tech-Ed Pvt Ltd

Nov 2021 - Mar 2023

- Achieved 90%+ improvement in student placement readiness scores across batches through comprehensive training of 200+ students in Java Full Stack, Python, and Data Structures, resulting in enhanced career outcomes.
- Delivered 30% reduction in student onboarding time and enhanced concept retention by optimizing modular curriculum content, resulting in improved learning efficiency.
- Produced 3 company-wide showcase selections from 10+ mentored student capstone projects, resulting in recognition for technical quality.
- Enhanced alignment between technical content and real-world industry expectations by honing skills in requirement gathering, stakeholder communication, and feedback iteration, resulting in improved curriculum relevance.
- Achieved 20% improvement in training outcome alignment with recruiter expectations through collaborative efforts with academic heads and placement teams, resulting in enhanced student employability.

Technical Trainer, Talention Solutions

Mar 2021 - Nov 2021

- Achieved 25% improvement in student technical proficiency by delivering structured training to batches of 30-50 students in Java, Android Development, and programming fundamentals, resulting in a solid foundation for advanced skills.
- Reduced module gaps by 15% through contributions to curriculum design and assessment framework improvements, identified via feedback surveys, resulting in enhanced learning effectiveness.
- Enhanced course content relevance by 30% through coordination with industry partners, ensuring alignment with job-ready skill requirements and improving student career preparedness.

EDUCATION

MBA in Digital Product Design & Management, Institute of Management Technology, Jodhpur

Jul 2024 - Jul 2026

Bachelor of Engineering in Mechanical Engineering, KDK College of Engineering

Jul 2016 - Mar 2020

GPA / Score: 9.02

SKILLS

Product Management & Strategy: Product Data Analyst, Product Management, Business Analysis, Roadmapping, User Story Writing, Agile/Scrum, Stakeholder Management, Market Research, Product Launches, Governance Model, Digital Best Practices, Brand Alignment, Content Management Principles, User Experience, Decision-Making, Problem-Solving

Data & Analytics: Data Analysis, Data Manipulation, Data Preprocessing, Data Normalization, Data Quality and Accuracy, SQL, ETL, Basic Statistics, Power BI, Excel, Product Data Attributes, Web Content Platforms, Online Database Management

AI/ML & Programming: Python (Expert), Machine Learning (TensorFlow, scikit-learn, OpenCV), Natural Language Processing (NLP), AI Orchestration (LangChain, CrewAI, Phidata), AI Agents, Agentic Systems, Java (Full Stack), ME Stack, Android Development

Tools & Platforms: Figma (Wireframing), JIRA, Confluence, MS Office (Word, Excel, PowerPoint), Git (Version Control), Docker

Soft Skills: Communication, Teamwork, Relationship Management, Presentation Skills, Strategic Thinking, Public Speaking, Curriculum Design, Cross-functional Communication, Analytical Skills

PROJECTS

Interactive DSA Visualization Platform

- Developed an interactive platform using JavaScript for visualization-first learning, integrating Python for backend logic and data manipulation, and leveraging Agile methodologies for product development.
- Achieved 40% improvement in product requirement clarity by conducting structured discovery workshops with 500+ learners, applying Amazon-style customer backwards thinking to define product requirements, resulting in a user-centered product vision.
- Enhanced product performance by 20% through defining and tracking key performance indicators (KPIs), identifying root causes of usage plummets, and presenting data-driven corrective actions to stakeholders, resulting in improved user experience and retention.
- Delivered 15% improvement in development efficiency by authoring Functional Requirement Documents (FRDs) for a 'Visualization-First' learning engine, prioritizing lightweight JavaScript animations, and ensuring alignment with technical and business constraints, resulting in streamlined product development.
- Achieved 25% improvement in UI intuitiveness by benchmarking 5+ competitor tools and optimizing the Logic-to-Code process through workflow mapping, resulting in enhanced user experience and operational efficiency.
- Ensured 95% on-time delivery and maintained a clean development backlog by orchestrating User Acceptance Testing (UAT) with pilot groups using Jira, triaging feedback into defect vs enhancement categories, resulting in enhanced product quality.
- Reduced new user ramp-up time by 25% through production of comprehensive User Guides and onboarding documentation, resulting in enhanced user experience and improved product adoption.

AI Bestie - Wearable & Mobile Ecosystem

- Developed an AI-powered wearable and mobile ecosystem using Python and ML, focusing on real-time data processing and contextual AI responses for enhanced user experience.
- Achieved 30% improvement in product clarity by defining comprehensive product requirements, user personas, and a feature roadmap for an AI companion app, resulting in a clear vision for product launches.
- Delivered 20% enhancement in real-time contextual AI responses by integrating wearable sensor data with a mobile interface, resulting in a highly responsive and personalized user experience.
- Accelerated product development lifecycle by 25% through leading end-to-end processes from ideation to user testing and iteration, ensuring rapid feature deployment and continuous improvement.

VoicePrep - AI-Powered Interview Preparation Platform

- Created an AI-powered interview preparation platform utilizing Python and NLP for real-time voice analysis and personalized feedback, enhancing user performance.
- Achieved 40% problem identification accuracy through user interviews with 30+ final-year students, leading to the development of an MVP focused on top pain points and resulting in a highly relevant product.
- Delivered 30% improvement in user feedback quality by implementing NLP-based voice analysis for real-time feedback on speech clarity, pace, and content relevance, resulting in enhanced user performance.
- Enhanced user satisfaction scores by 40% from v1 to v2 through iterative feature development based on continuous feedback cycles, resulting in a highly refined and user-centric AI-powered platform.
